

Animate Slide Content and Images

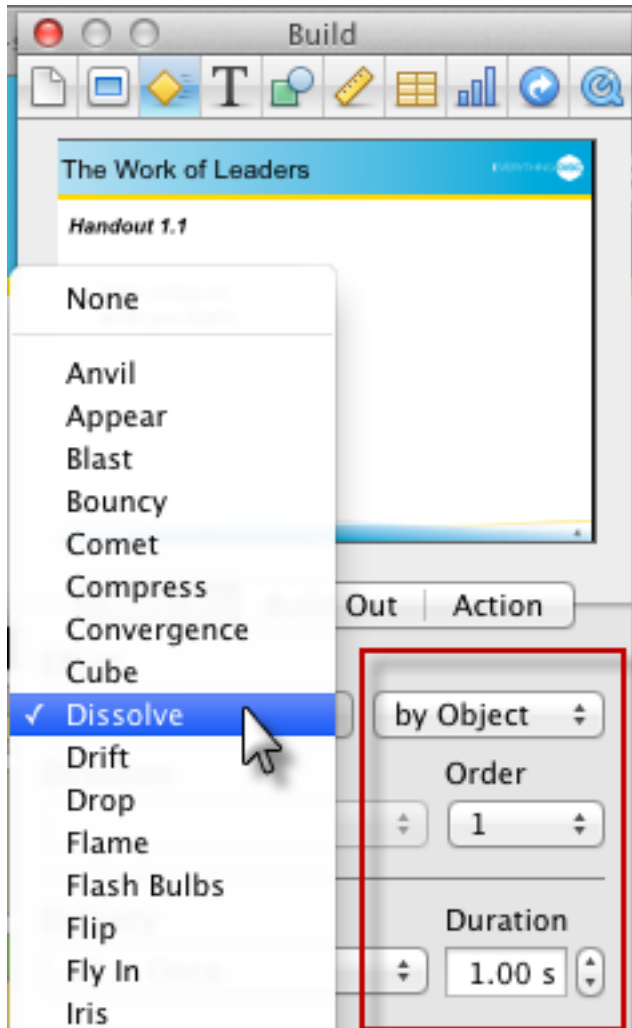

In Navigator view, click on the slide you want to edit, then click on the image or text box that you wish to animate. Click on the Inspector button in the toolbar to open the Inspector window. Click on the Build Inspector button.

Choose how you want to build the animation:

- **Build In:** ways to make the text box or image appear on the screen
- **Build Out:** ways to make the text box or image leave the screen
- **Action:** ways to make the text box or image move or change

The image below shows the Build In options. Select how you want your text box or image to build, then you can edit the order they animate and how long you want it to take to build.

To edit how multiple builds on one screen interact, open the Build Order drawer by clicking **More Options** at the bottom of the Build Inspector. To set when a build occurs, select it and drag it up or down in the list.

You can also set it to occur on a click of the mouse, after the previous build, or with the previous build in the **Start Buildfield** at the bottom of the drawer.
